

Question 1

What is a GUI? 1 / 1 point

A user interface that runs only on Linux operating systems

A user interface that only runs on mobile devices

A user interface that allows people to interact with a computer through commands

A user interface that enables people to manage tasks on a computer using icons

Correct

A GUI, or graphical user interface, is a user interface that enables people to manage tasks on a computer using icons. Most operating systems can be used with a GUI.

Question 2

Which of the following can be components of a GUI? Select all that apply. 1 / 1 point

Hardware

Task bar

Correct

A task bar is a common component of a GUI.

Start menu

Correct

A start menu is a common component of a GUI.

Desktop icons and shortcuts

Correct

Desktop icons and shortcuts are common components of a GUI.

Question 3

Fill in the blank: A security professional uses a(n) _____ to interact with a computer using text-based instructions. 1 / 1 point

text system

operating system

CLI

GUI

Correct

A security professional uses a CLI, or command-line interface, to interact with a computer using text-based instructions.

Question 4

A useful feature of a CLI is that it records a history file of commands and actions. 1 / 1 point

True

False

Correct

A useful feature of a CLI is that it records a history file of commands and actions. This can help security analysts confirm that they used the correct commands from a playbook. It also might help them trace the actions of an attacker.
